AL400ULPD Series
Power Supply/Charger

Installation Guide

Models Include:

• AL400ULPD4
  - Four (4) Fused Outputs

• AL400ULPD8
  - Eight (8) Fused Outputs

• AL400ULXPD16
  - Sixteen (16) Fused Outputs

• AL400ULPD4CB
  - Four (4) PTC Outputs

• AL400ULPD8CB
  - Eight (8) PTC Outputs

• AL400ULXPD16CB
  - Sixteen (16) PTC Outputs

For a red enclosure, add an “R” suffix to the part # e.g. AL400ULPD8R
Overview:
These UL Listed multi-output power supply/chargers convert a 115VAC / 60Hz input, to a 12VDC or 24VDC regulating output (see specifications below).

Do not exceed total output rating of 2.5 amp per unit.

**Specifications:**

**Input:**
- Input 115VAC / 60Hz, 1.45 amp.
- AC input and DC output LED indicators.

**Output:**
- Class 2 Rated power-limited output(s).
- 12VDC or 24VDC selectable output.
- 4 amp total supply current at 12VDC or 3 amp total supply current at 24VDC.
- Filtered and electronically regulated outputs.
- Short circuit and thermal overload protection.

**Battery Backup:**
- Built-in charger for sealed lead acid or gel type batteries.

**Battery Backup (cont’d.):**
- Automatic switch over to stand-by battery when AC fails.
- Maximum charge current .7 amp.
- Zero voltage drop when switched over to battery backup.

**Supervision:**
- AC fail supervision (form "C" contacts).
- Low battery supervision (form "C" contacts).
- Battery presence supervision (form “C” contacts).

**Additional Features:**
- Power supply, enclosure, cam lock and battery leads.
- All models are available in red enclosure (add an “R” suffix to the part # e.g. AL400ULPD8R).

---

**Fig. 1**

CAUTION: De-energize unit prior to servicing. For continued protection against risk of electric shock and fire hazard replace fuse with the same type and rating 3.5A, 250V. Replace fuse cover before energizing. Do not expose to rain or moisture.

AC Delay

---

CAUTION: When power supply board is set for 12VDC use only one (1) 12VDC stand-by battery.

Keep power-limited wiring separate from non-power limited. Use minimum .25” spacing.
Installation Instructions:
Wiring methods shall be in accordance with the National Electrical Code/NFPA 70/NFPA 72/ANSI, and with all local codes and authorities having jurisdiction. Product is intended for indoor use only.

1. Mount unit in desired location. Mark and predrill holes in the wall to line up with the top two keyholes in the enclosure. Install two upper fasteners and screws in the wall with the screw heads protruding. Place the enclosure’s upper keyholes over the two upper screws, level and secure. Mark the position of the lower two holes. Remove the enclosure. Drill the lower holes and install the two fasteners. Place the enclosure’s upper keyholes over the two upper screws. Install the two lower screws and make sure to tighten all screws (Enclosure Dimensions, pg. 7-8).

2. The power supply is pre-wired to the ground (chassis). Connect main incoming ground to the provided green grounding conductor lead. Connect unswitched AC power (115VAC / 60 Hz to terminals marked [L, G, N] (Fig. 1, pg. 3). Use 14 AWG or larger for all power connections (Battery, DC output, AC input). Use 22 AWG to 18 AWG for power limited circuits (AC Fail/Low Battery reporting).

   Keep power-limited wiring separate from non power-limited wiring (115VAC / 60Hz Input, Battery Wires). Minimum .25” spacing must be provided.

3. Set the unit to the desired DC output voltage by setting SW1 (Fig. 1b, pg. 3) to the appropriate position (Power Supply Voltage Output Selections Chart, pg. 3).

4. Measure output voltage before connecting any devices to ensure proper operation. Improper or high voltage will damage these devices. When servicing the unit, AC mains should be removed.

5. Connect devices to be powered to terminal pairs 1 to 4 marked [1P & 1N thru 4P & 4N] (Fig. 2a & 2b, pg. 6) or 1 to 8 marked [1P & 1N thru 8P & 8N] (Fig. 3a & 3b, pg. 6) carefully observing correct polarity.

6. For Access Control applications, batteries are optional. When batteries are not used a loss of AC will result in the loss of output voltage. When the use of stand-by batteries is desired, they must be lead acid or gel type.

7. Connect appropriate signaling notification devices to AC FAIL & BAT FAIL (Fig. 1a, pg. 3) supervisory relay outputs.

   Note: When used in fire alarm, burglar alarm or access control applications, “AC Fail” relay should be utilized to visually indicate that AC power is on (Fig. 1c, pg. 3).

8. Please insure that the cover is secured with the provided Key Lock.

Wiring:

USE 14 AWG or larger for all power connections.

Note: Take care to keep power-limited circuits separate from non-power limited wiring (115VAC, Battery).

Maintenance:

Unit should be tested at least once a year for the proper operation as follows:

Output Voltage Test: Under normal load conditions, the DC output voltage should be checked for proper voltage level (Power Supply Voltage Output Specifications Chart, pg. 3).

Battery Test: Under normal load conditions check that the battery is fully charged, check specified voltage both at battery terminal and at the board terminals marked [+ BAT -] to insure there is no break in the battery connection wires.

Note: Maximum charging current under discharges is .7 amp.

Note: Expected battery life is 5 years, however it is recommended changing batteries in 4 years or less if needed.
**LED Diagnostics:**
**AL400ULXB - Power Supply Board**
